### 3.1 ELO

By adding a jumper to the A-Touch controller, the whole system becomes ELO-compatible. The touch registration will be realised by ELO-drivers.

There are several reasons for doing this:

- You are already using application software with "build-in" ELO drivers.
- You are using clients with pre-installed ELO-drivers.
- You replace an original ELO-touch screen with an A1-touchscreen.

Then benefit is; you don't have to install new software in the above mentioned situation.

Remark:

If you want to change your driver software from touchkit to ELO, or the other way around, you have to de-install the old software completely before installing the new software.
